DETAILED ACTION

Allowable Subject Matter

1. Claims 1-54 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. **As per claims 1 and 22 and dependent claims 2-11 and 23-28 respectively**, the examiner found no reference in the prior art that disclosed or made obvious a method (or computer program) for generating a basis material decomposition conversion table or function comprising the steps of: a) generating a set of projection values for each of two or more energy spectra using one or more component characteristics and attenuation coefficients to simulate responses of an X-ray imaging system to a plurality of lengths of the basis materials; and b) generating at least one of a table and a function from the sets of projection values and the one or more component characteristics as recited in independent claims 1 and 22.
4. **As per claims 12 and 29 and dependent claims 13-21 and 30-38 respectively**, the examiner found no reference in the prior art that disclosed or made obvious a method (or computer program) for generating a map of a basis material, comprising: a) generating a line-integral projection set using a first projection set, a second, projection set, and at least one basis material decomposition table or function; and b) reconstructing the line-integral projection set to form a map as recited in independent claims 12 and 29.
5. **As per claim 39 and dependent claims 40-43**, the examiner found no reference in the prior art that disclosed or made obvious an X-ray image analysis system comprising a computer system configured to generate a set of projection values for each of two or more energy spectra using attenuation coefficients for a pair of basis materials and one or more component

characteristics of at least one of an X-ray source, X-ray filter and detector to simulate responses of the detector to a plurality of lengths of the basis materials, and to generate at least one of a table and a function from the sets of projection values and the one or more component characteristics as recited in independent claim 39.

6. **As per claim 44 and dependent claims 45-49**, the examiner found no reference in the prior art that disclosed or made obvious an X-ray image analysis system comprising a computer system configured to generate a line-integral projection set using a first projection set, a second projection set, and at least one basis material decomposition table or function and to reconstruct a line-integral projection set to form a map as recited in independent claim 44.

7. **As per claim 50 and dependent claims 51-54**, the examiner found no reference in the prior art that disclosed or made obvious an X-ray image analysis system a computer system configured to receive a set of projection data; means for simulating responses of a detector to a plurality of lengths of a pair of basis materials at two or more energy spectra to generate a set of projection values for each of two or more energy spectra; and means for generating a basis material decomposition table or function from the sets of projection values, as recited in independent claim 50.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
